CHIEF EXECUTIVES

Quarterly National Ambulance Data Report

Demand, Response and Hospital Handover Data to the end of March 2026

Final Draft Published – 24th April 2026. Author, Steve Hearnshaw - Data Analyst

2. Summary and Contents for March 2026

Demand remained relatively steady in March, which saw incidents reach the third highest average daily volume to date. Response times increased slightly, but continue to trend down/faster over time. Similarly, longer handover delays are contracting, with strong reduction in the number of longest delays compared with this time last year – although the hours lost to handover delays continue to represent over a tenth of face-to-face ambulance deployments across the month.

Section 1.

Contact Volume and Call Answer Time

GO

- The average daily number of 999 calls answered decreased slightly in March, but volume has been steadily increasing for the last three years, nearing 10-million calls in the most recent 12-months. Call answer time has averaged just over three-seconds for the last 12-months.

Section 2.

Incidents and Response Time, by Category

GO

- Category-2 incidents contracted across England in March, but every other category saw demand increase for some trusts. Response times slowed, but over time are trending faster – Category 2 response has now been faster than 30-minutes since December 2025.

Section 3.

Incidents by Response Outcome

GO

- Both Hear-and-Treat (H&T) and Conveyance continue to grow in volume over time – although at very different rates. In March 2026 the number of daily H&T responses was 70-percent greater than in March 2023. This compares with 11-percent growth for Conveyance.

Section 4.

Handover Delays and Turnaround Time

GO

- There is notable contraction in the number of longer handover delays. Hour-plus delays have contracted by 23-percent compared with March 2025, three-hour plus delays by 42-percent and ten-hour plus delays by 91-percent.

Section 1

Contact Volume and Call Answer time

- [Demand: Volume of Contacts](#)
- [Demand: Volume of 999 Calls Answered](#)
- [Demand: Call Answering Time](#)
- [Calls: Monthly Growth and Answer Time, Range](#)

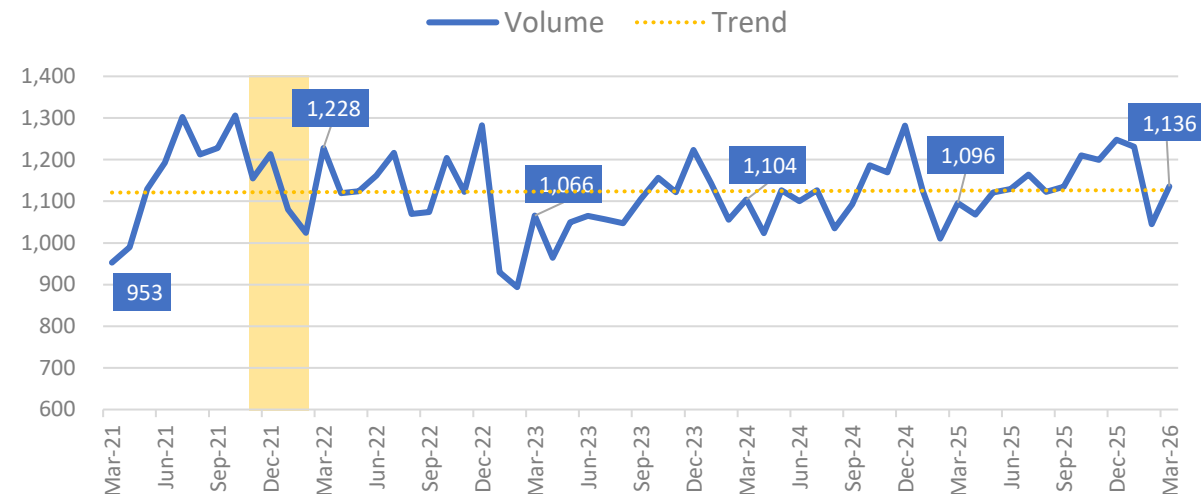

4. Demand: Volume of Contacts to Ambulance Control Rooms (Measure A0)

There were 1.3-million contacts to control centres across the month. This translates as 37-thousand calls each day, a decrease of 699 contacts from February. Demand has grown steadily since 2024 - in the 12-months to March 2026 there were 13.8-million contacts, 435-thousand more than the previous period.

1. Average Daily Volume of Contacts ('000, A0)

2. Monthly Volume of Contacts ('000, A0)

Average Daily Volume for March 2026: Fast Facts

3. Volume of Contacts in the 12 months to Mar ('000, A0)

5. Demand: Volume of 999 Calls-Answered (Measure A1)

999 calls-answered follow the pattern outlined on the previous page – a steep increase in the monthly volume, but a slight decrease in daily demand. The annualised volume similarly has grown steadily since 2024, nearing 10-million in the most recent period.

1. Average Daily Volume of Calls Answered ('000, A1)

2. Monthly Volume of Calls Answered ('000, A1)

Average Daily Volume for March 2026: Fast Facts

3. Vol of Calls Answered in the 12 months to Mar ('000, A1)

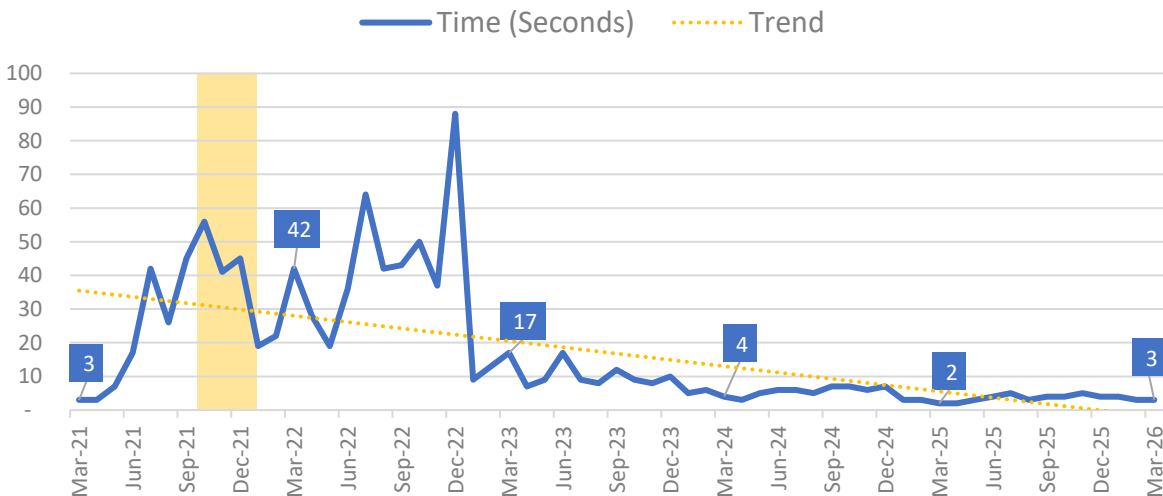

Yellow areas show COVID waves in the UK: source ONS.

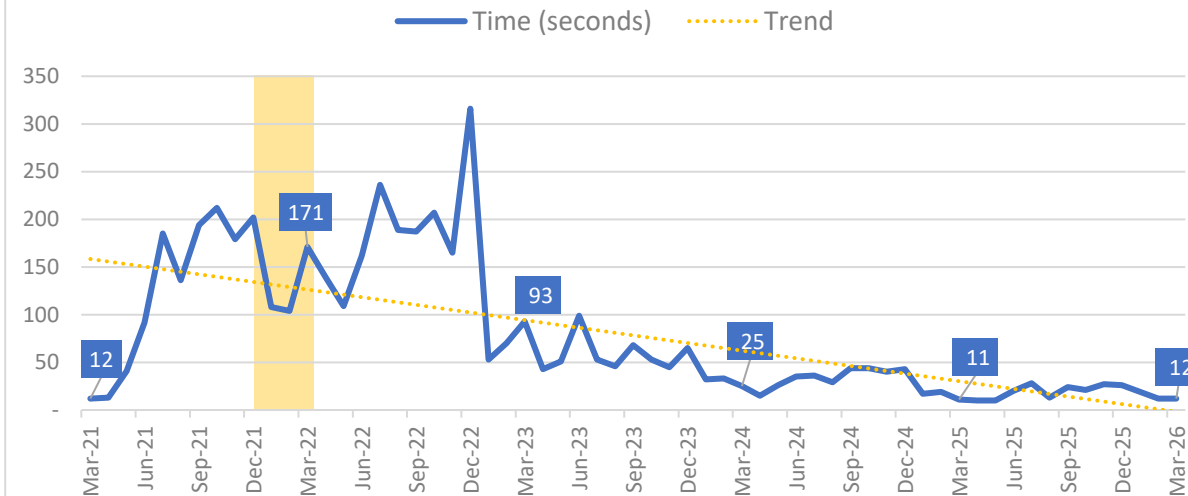

6. Demand: Call Answer Time (999, Measures A3 and A5)

Mean call answer-time remained at three-seconds, and has averaged just over three-seconds in the 12-months to March 2026. This compares with nearly nine-seconds in the 12-months to March 2024, and 37-seconds in the 12-months to March 2023.

7. Calls: Range of Month-on-Month Growth and Call Answer Time, March 2026

Month-on-month call volumes contracted for all but one trust. For most trusts, volumes remained unchanged, or contracted. Call answer-time averaged 0.7-seconds for the fastest three trusts, and six-seconds for the slowest three.

Growth in Contact Volume (Daily Av, Feb to Mar)

Mean Call Answer Time - Range (seconds)

Growth in Calls Answered Volume (Daily Av, Feb to Mar)

95th Centile Call Answer Time (seconds)

Notes: Largest/ Smallest shows average for the three trusts with largest/ smallest growth/ contraction. Fastest/ Slowest shows the average time from the fastest three, and slowest three trusts in England. Calculation excludes Isle of Wight.

Section 2

Incidents and Response Time, by Category

- [All Incidents, Volume and Share](#)
- [Monthly Growth in Incident Volumes, Range](#)
- [Demand: C1 Incidents](#)

- [Demand: C4 Response Times](#)
- [C3 and C4 Response Times, Range](#)
- [Demand: S136 Response Times](#)

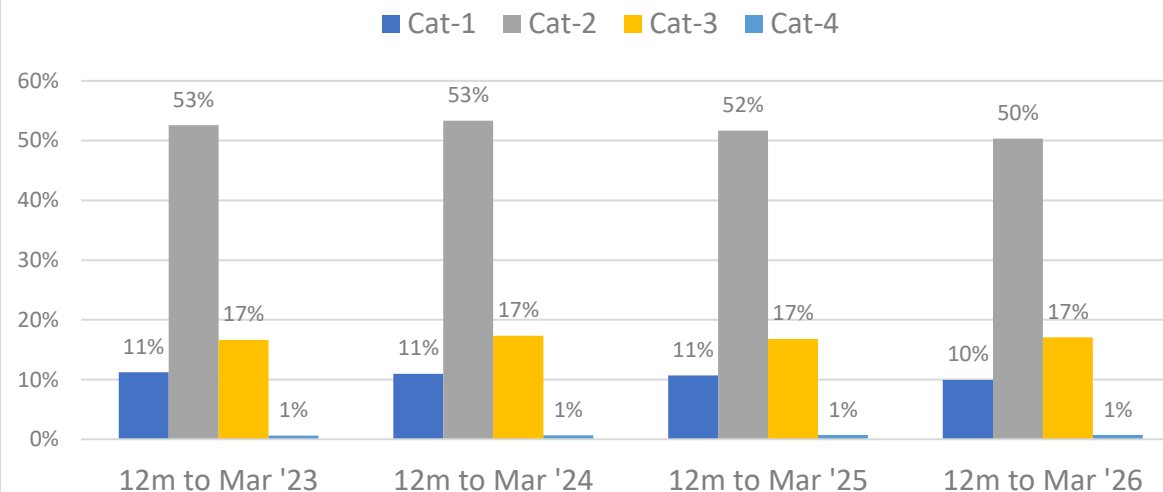

9. All Incidents, Volume and Share (A7)

Incident volume increased to 812-thousand across the month. The average daily figure saw a slight decrease (of 152 incidents), but the annualised data show demand reaching 9.4-million incidents, 1.3-million more than the 12-months to March 2023. Incident mix remains largely unchanged over this time (chart 2.)

1. Average Daily Volume of Incidents ('000, A7)

+1.3 thousand

Yellow areas show COVID waves in the UK: source ONS.

3. Volume of Incidents in the 12 months to Mar ('000, A7)

10. Range, Month-on-Month Growth in Average Daily Incident Volumes, March 2026

Category-2 incidents contracted across England in March, but each of the other categories saw demand increase for at least some trusts. This was most notable for Categories-3-and-4.

Growth in Cat-1 Volume (Daily Av, Feb to Mar)

Growth in Cat-2 Volume (Daily Av, Feb to Mar)

Growth in Cat-3 Volume (Daily Av, Feb to Mar)

Growth in Cat-4 Volume (Daily Av, Feb to Mar)

Notes: Notes: Largest/ Smallest shows average for the three trusts with largest/ smallest growth/ contraction. Calculation excludes Isle of Wight.

11. Demand: Category-1 Incidents (A8)

Average daily Category-1 demand in March was largely unchanged from February. Annualised data show demand in the most recent period was lower than the previous two. However, the 939-thousand total compares with 722-thousand Category-1 incidents in the 12 months to March 2020 (pre-covid, not shown).

1. Average Daily Volume of Cat-1 Incidents (A8)

2. Volume of Cat-1 Incidents ('000, A8)

3. Vol of Cat-1 Incidents in the 12 months to Mar ('000, A8)

Yellow areas show COVID waves in the UK: source ONS.

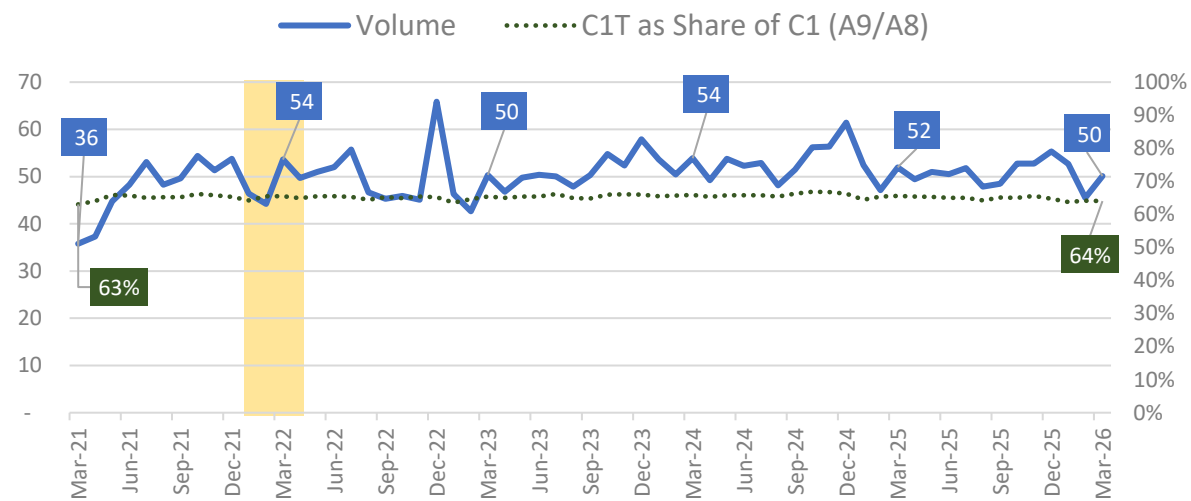

12. Demand: Category-1T Incidents (A9) (Cat-1 patients conveyed by an ambulance service emergency vehicle)

On average, 1,617 (64-percent) of Category-1 attendances saw patients transported by an emergency vehicle each day in March. This is largely unchanged from the previous month. The proportion of patients conveyed has averaged 65-percent over the past four years, with very little month-on-month change.

1. Average Daily Volume of Cat-1T Incidents (A9)

2. Volume of Cat-1T Incidents ('000, A9)

Average Daily Volume for March 2026: Fast Facts

Rank in series to-date

3. C1T as Share of C1 in the 12 months to Mar (% , A9/A8)

Yellow areas show COVID waves in the UK: source ONS.

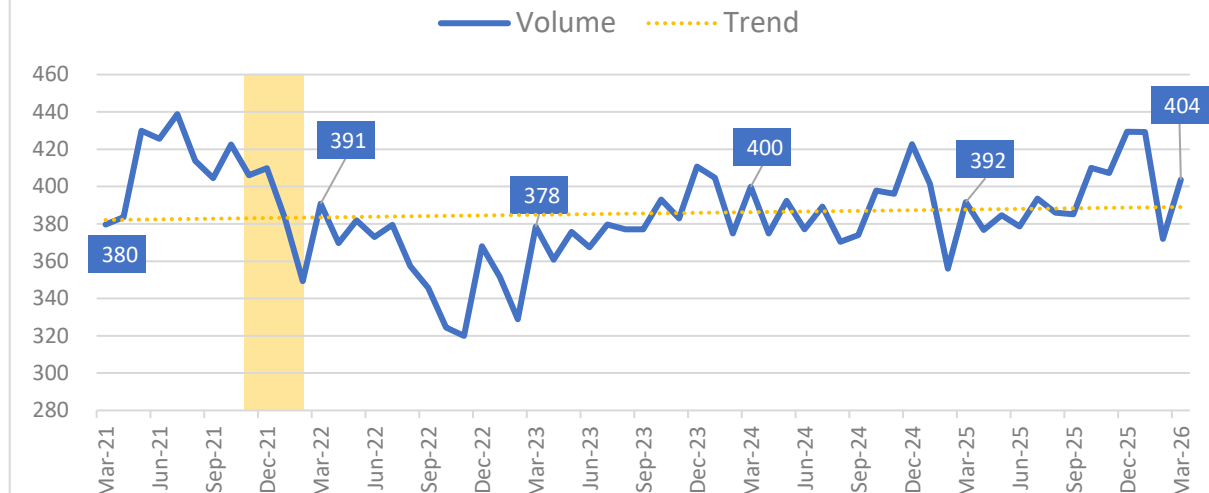

13. Demand: Category-2 Incidents (A10)

While Category-2 demand saw (relatively) the most pronounced month-on-month contraction of the four categories in England (see page 10). However, the annualised data show a steady increase. There were 4.8-million incidents in the most recent period, nearly half-a-million more than the same period in 2023.

1. Average Daily Volume of Cat-2 Incidents (A10)

2. Volume of Cat-2 Incidents ('000, A10)

Change from March 2025
+388 incidents

3. Vol of Cat-2 Incidents in the 12 months to Mar ('000, A10)

Yellow areas show COVID waves in the UK: source ONS.

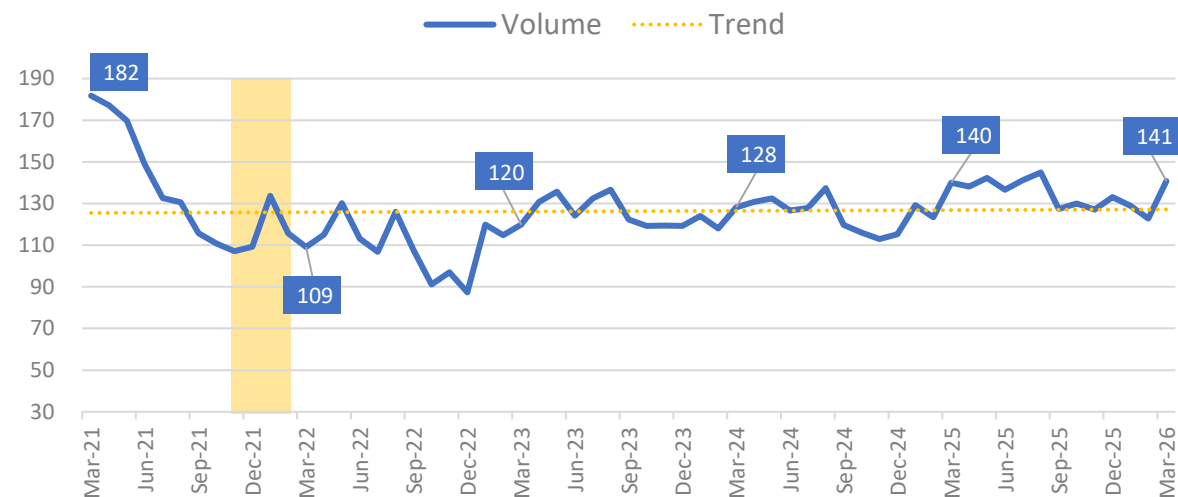

14. Demand: Category-3 Incidents (A11)

Category-3 volume increased in eight-out-of-ten trusts in March. There were, on average, 4,541 incidents each day – the greatest volume since August last year. Annualised data show a higher volume of Category-3 incidents than any of the periods since 2023 (charted, but also 2022, not charted).

1. Average Daily Volume of Cat-3 Incidents (A11)

2. Volume of Cat-3 Incidents ('000, A11)

3. Vol of Cat-3 Incidents in the 12 months Mar ('000, A11)

Yellow areas show COVID waves in the UK: source ONS.

15. Demand: Category-4 Incidents (A12)

Daily demand for Category-4 remained unchanged since February – but with 202 incidents a day, March 2026 saw more demand for this category than any March since 2021. Volume is increasing over time, with 70-thousand in the 12-months to March 2026 (21-thousand more than the 12-months to March 2023).

1. Average Daily Volume of Cat-4 Incidents (A12)

3. Volume of S136 Incidents in the 12 months to Mar (A106)

Yellow areas show COVID waves in the UK: source ONS.

17. Demand: Category-1 Response Times (Measures A25 and A26)

Mean response time slowed between February and March, but this has been a seasonal trend since 2021. From September 2023 mean response is getting steadily faster averaging 08:11 over the last 12 months vs. 08:58 in the 12-months to March 2023.

Yellow areas show COVID waves in the UK: source ONS.

19. Range, Category-1 and Category-2 Response Time, March 2026

Highlighting outlying trusts shows ongoing variation in response times (influenced by a number of factors, including geography). For Category-1 the difference between fastest and slowest trust groups was just over two minutes, for Category-2 the difference was around nine minutes.

Cat-1 Mean Response Time (hh:mm:ss) NS = 7 minutes

Cat-2 Mean Response Time (hh:mm:ss) NS = 18 minutes
RS = 30 minutes

Cat-1 90th Centile Response Time (hh:mm:ss) NS = 15 minutes

Cat-2 90th Centile Response Time (hh:mm:ss) NS = 40 minutes

Notes: Fastest/ slowest shows the average share of incidents from the fastest three, and slowest three trusts in England for each category. Calculation excludes Isle of Wight.

20. Demand: Category-3 Response Times (Measures A34 and A35)

Category-3 mean reflects the trend seen above – a seasonal month-on-month slow-down against the long-term trend of faster responses. The average for the last 12-months was around two-hours compared with two-and-a-half-hours in the 12-months to March 2024.

Mean C3 Response Time (hh:mm:ss, A34)

Section 3

Incidents by Response Outcome

- [Share of Response Outcomes](#)
- [Share of Responses, Range](#)
- [Hear and Treat](#)
- [See and Treat](#)
- [Incidents with Transport to ED](#)
- [Incidents not with Transport to Destination other than ED](#)

25. Share of Response Outcomes

Charts 1 and 2 show the volume of outcomes and the share these represent for Hear-and-Treat (H&T) and Conveyances to Emergency Departments. H&T shows both volume and share increasing, compared with Conveyances, where volume has increased, but more slowly, and share has gradually decreased.

1. Hear and Treat ('000), Volume and Share of Responses

2. Conveyed to ED, Volume ('000) and Share of Responses

3. Share of all Responses (12m to Mar)

H&T = Hear and Treat, S&T = See and Treat

Yellow areas show COVID waves in the UK: source ONS.

26. Range, Share of Response Outcomes, March 2026

Share of outcomes differ by trust, but to a lesser extent than some other measures reported here. Hear-and-Treat, for example, has a difference of six percentage points between the highest and lowest groups, Conveyance to Emergency Departments a difference of five percentage points.

Conveyed to ED as Share of Responses (%)

See and Treat as Share of Responses (%)

Hear and Treat as Share of Responses (%)

Conveyed Elsewhere as Share of Responses (%)

Notes: Largest/ smallest shows the average share of responses from the largest three, and smallest three trusts in England for each category. Calculation excludes Isle of Wight.

27. Hear and Treat (measure A17)

The average daily number of H&T outcomes was steady between February and March and continue to grow year on year. In the past 12-months were 1.7-million H&T outcomes, more than 700-thousand greater than the 12-months to March 2023 (growth of 70-percent).

1. Average Daily Volume of H&T Responses (A17)

2. Volume of H&T Responses ('000, A17)

Average Daily Volume for March 2026: Fast Facts

Rank in series to-date
4th highest

Change from February 2026
-23 outcomes

Change from March 2025
+874 outcomes

3. Vol of H&T Responses in the 12 months to Mar ('000, A17)

Yellow areas show COVID waves in the UK: source ONS.

28. See and Treat (measure A55)

See and Treat (S&T) outcomes were also steady in March. As with H&T, S&T outcomes continue to increase over time. There were 2.7-million responses in the most recent 12-month period, 127-thousand more than the same period in 2023.

1. Average Daily Volume of S&T Responses (A55)

2. Volume of S&T Responses ('000, A55)

Average Daily Volume for March 2026: Fast Facts

Rank in series

Yellow areas show COVID waves in the UK: source ONS.

38. Volume of Patient Handover Delays over 60 Minutes (source, NAIG)

Hour-plus delays follow the pattern seen above: a decrease in month-on-month volume, and the lowest volume for any March since 2022. The contraction for these delays over the last two 12-month periods is 23% - a figure that increases with even longer handover delay volumes (see page 40).

1. Average Daily Volume of Handovers at 60+ Minutes

2. Volume of Handovers at 60+ Minutes ('000)

Average Daily Volume for March 2026: Fast Facts

Rank in series to-date
57th highest

Change from February 2026
-399 delays

Change from March 2025
-436 delays

3. Vol of Handovers at 60+ Mins, 12 months to Mar ('000)

Yellow areas show COVID waves in the UK: source ONS.

39. Hours Lost to Patient Handover Delays over 60 Minutes (source, NAIG)

For hours lost to hour-plus delays, the volume for March 2026 was a third of those lost in March 2022.

1. Average Daily Hours Lost to Handovers at 60+ Minutes

2. Hours Lost to Handovers at 60+ Minutes ('000)

Monthly Hours Lost for March 2026 : Fast Facts

Rank in series
to-date
55th highest

Change from
February 2026
-653 hours

Change from
March 2025
-613 hours

3. Hours Lost to Handovers at 60+ Mins, 12 months to Mar ('000)

Yellow areas show COVID waves in the UK: source ONS.

40. Delays of Three Hours and Longer (source, NAIG)

The reduction in handover delays seen on previous pages is reflected in the longest delays recorded. Over the last 12-months, contraction rates for three, four and five hour plus delays were all 42% or higher, while 10-hour delays have contracted by 91% over this time. Meanwhile, four trusts account for nearly all these delays, with over half being accounted for by WMAS alone.

1. Number of handovers equal-to or more than...

■ Mar-25 ■ Mar-26

Difference: -2,944

Difference: - 1,554

Difference:- 858

Difference: - 123

Contraction: -42%

Contraction: -42%

Contraction: -46%

Contraction: -91%

2. Longest delays by Trust

■ Three hours ■ Four hours ■ Five hours ■ Ten hours

The above trusts account for 99.9% of handover delays of three hours or longer in March 2026

41. Impact on Patients and Crew (source, NAIG, [AQI](#) Data and [AACE](#))

Around 18-thousand patients experienced potential harm* as a result of hour-plus delays in March 2026. Over the same time, the combined lost hours represent 11-percent of Face-to-Face (F2F) incidents across the whole month - the equivalent of all F2F resources deployed by EEAST or SWAST or WMAS in March 2026.

Vol of >60 min handovers by estimated harm (NAIG & AACE)

42. Mean Turnaround and Time-to-Clear* (source, NAIG)

Mean Turnaround time was steady in March, and one minute slower than March 2025. Time to Clear saw little month-on-month change, and was a half minute faster than in March 2025.

* "Time-to-clear" = "Mean Turnaround Time" less "Mean Handover Time"

43. Appendix: How Most Data is Reported in this Document

Most sections in this report follow the same layout, with data presented identically on each page. The main exceptions to this are call-handling and response time data, which focus only on the monthly figure, and the “Range” charts. This page shows what the most common graphs show, and how they are calculated.

Average Daily Data

- This box shows a line graph displaying the average daily volume: this is calculated by dividing the metric by the days in the month. This smooths out the steeper changes sometimes seen in monthly data due to the difference in month length (for example February to March).
- As with the monthly data, the average daily figures use blue lines to show the main trend, orange to show the series-average, and red to show any national standards
- Data labels again show relevant values, as highlighted in the “Monthly Data” section
- Call-handling and response time data is not displayed in this way

Monthly Data

- This box shows a line graph displaying the data at monthly level, month-by-month. These main data are displayed as a blue line.
- The value for the most recent month, and every previous instance of that month in the chart, the line graph includes a dotted orange line, which represents the series-average, with a linked data-label showing the value for this line.
- National standards, for response times, are included as a dotted red line, with the national standard displayed in yellow text in a red data label
- Call-handling and response time data is only displayed in this way

Fast Facts

This box generally shows how the latest month ranks against all months since January 2018

This box generally shows any change between the previous, and most recent month

This box generally shows any change between the most recent month, and the same month 12-months ago

“Annualized Data” – 12 months to...

- This shows a bar chart with the total figure for 12-months, ending with the most recent month
- Four 12-month periods are included
- Two grey arrows show the percentage change between the last three periods (e.g. most previous-to-most recent, and, two-years previous-to-most-recent)
- Call-handling and response time data is not displayed in this way

Yellow areas always show COVID waves in the UK: source ONS.
